

GEEKY MEDICS

Clinical Reasoning Activities | Crossout!

Game Template Sheet

Instructions

1. Write 25 related conditions across the empty spaces on the game board.
2. Make 2 copies of the board (one for each person).
3. Each player should choose and memorise a single diagnosis from the board.
4. Players take turns to ask a question to rule in/rule out different diagnoses using either history-only questions, examination-only questions, investigation-only questions or a mixture (depending on which area of clinical reasoning you'd like to focus on).
5. Cross out diagnoses when you feel you have ruled them out.
6. Shout out when you think you have reached the most likely differential diagnosis.
7. The first person to choose the correct diagnosis wins.
